(This depends on if your ISO has install.wim or

# Lotus SmartSuite 9.8.iso

Here are the serial numbers for the discs, but the discs are. A: I've been through this recently: I found a post on Planet Java where someone said that the ISO checksum for that licence is valid. I tried it and it worked - I was able to burn it to a CD and run it on my computer. I also tried it on my local VM and it worked. I did not try it on other people's computers, only my own. There were two threads here on the old IBM forum where people complained that Lotus had a major flaw in their disc creation software. They reported that a corrupt disc would start the installation, instead of ending it. In one of the threads, Lotus gave a challenge to create a corrupt disc and prove that it didn't work. I can't find that post anymore, but I found the data here. From that, I was able to create a disc using the ISO I downloaded. There were two problems though: The very first time I installed, the Lotus installer would hang at the very last step. I tried using different discs and different versions of Lotus. The second and third times I installed, the installer was able to install it, but then would hang at the Lotus Start screen. I attempted to fix this problem by using the Lotus application for making a corrupt disc in my VM, then burning it. However, when I opened the corrupt disc to install it on my machine, it would hang again, just at the beginning of the installation. I uninstalled the application and reinstalled it, thinking it had some kind of problem with where the data for the installation was stored in case of a corrupt disc. But it didn't work. I then posted on the forum again, asking if anyone had the same problem. One person said they could burn a corrupted disc, and installed it. Later, I burned a copy of a retail disc onto my disc drive. I then created a corrupt disc and burnt it. I then installed the corrupt disc on my machine and tried again. It worked! I was able to install Lotus. In this case, I think it works because the retail disc was created in the same physical region that the corrupt disc was created, in another application. On my VM, I don't have a separate physical drive for the disc. So I can't burn the retail disc onto my VM's disc 50b96ab0b6

I have an error with the latest version of Lotus smartsuite. Does anyone know how to install the previous version from 9.7.2.08?. IBM Lotus SmartSuite 9.8.1.5 is a version that lacks the ability to be opened and read in a 64-bit environment. Lotus. Download ISO files of product, lotus smartsuite 9.8.1.5.
